5 Log viewer.....	4

## 1. Overview

An overview of CMW Admin official documentation here.

## 2. Configuration

### 2.1. XML configuration

The XML configuration file contains the [Server Tree](#) and the Device Tree (see [Device Explorer](#)) content. It allows to use different servers/devices view.

There are some little changes to make if you want to open an old CMW Admin configuration file :

1. Remove the showModuleChooserAttribute from the Modules element.
2. Add the xmlns attribute in the Modules element : xmlns="xml.mc.cern"
3. Remove the monitoring attribute from the SrvExStatusMonitor element.
4. If exists, remove the content of the SrvExStatusMonitor element.

### 2.2. Preferences file

The preference file cmwadmin.ref is stored in the user directory. This file contains a reference to the last opened file and is updated each time an XML configuration is opened/saved.

**Warning:**

If the user directory cannot be found, preferences are stored at the root of the file system.

### 2.3. User list

The user list contains rights for each "special" CMW-Admin user. These rights are the followings:

- s: for (s)erver administrator: can shutdown and restart servers.
- l: for (l)og viewer: can view servers loggings.
- L: for (L)og administrator: can change servers loggings levels.
- w: for (w)eb directory administrator: can save configuration files in the web directory.
- a: for (a)pplication administrator: can change advanced settings.

If you are not in the user lists, CMW-Admin will start none of these special rights. To become a privileged user, [send me an mail](#) with the needed rights (just use the same letters

has the ones in the list) and a reason to have them.

### **3. Server explorer**

This section is a short and general presentation of the Server Explorer.

- **Server Tree** : Shows all servers in a tree structure.
  - **1** A server group.
  - **2** A server.
- **Status Monitor** : Shows all servers regarding selected nodes in the tree.
  - **3** A monitored server group.
  - **4** A monitor button.
- **Server Admin** : Shows informations about the "watched" server.
  - **5** Tabs to choose the kind of shown informations.
  - **6** Refresh informations button.
  - **7** Special control buttons, depends of the current tab.
  - **8** Last refresh time and date.
  - **9** Server informations, depends of the current tab.
- **Status Bar** : Shows the status of CMW-Admin.
  - **10** The last status message.
  - **11** The progress bar.
  - **12** The status bar, opens advanced status bar.

#### **3.1. Menu bar**

Menu bar documentation.

#### **3.2. Server tree**

Server tree documentation.

#### **3.3. Monitoring**

Monitoring documentation.

#### **3.4. Server admin**

Server admin documentation.

### **3.5. Find server**

Find server documentation.

### **4. Device explorer**

how to use CMW Admin device explorer here.

### **5. Log viewer**

how to use CMW Admin log viewer here.
