| 1 Overview.....                               | 2 |
| 2 Viewing abcmw1 log events in real time..... | 2 |
| 3 Viewing stored log files.....               | 2 |

## 1. Overview

Currently, [Apache Chainsaw v2](#) can be used to view all CMW logs event. There are two kinds of events that can be watched:

- Old events by viewing abcmw1 stored log files.
- Current events by connecting to abcmw1 log source.

### Warning:

To launch Chainsaw from your web browser you need a working [Java Web start](#).

Chainsaw can be launched with our configuration directly from your web browser

## 2. Viewing abcmw1 log events in real time

To view abcmw1 log events in real time, simply click on the "abcmw1" tab as shown in the picture below.

## 3. Viewing stored log files

To view CMW log files, do the following steps regarding next picture :

1. Open the "File" menu
2. Move the cursor on the "MRU..." menu item
3. Click on the file you want to see

The files starting with `CMWcentral` are central logs, they contain all events. Files starting with `CMWerrors` contain only error events.
